

Normalization of Scores

"The Online Exam. for the post of UDC was conducted in Eight Shifts in the month of March, 2016. The applicability of Normalization Methodology for the post of UDC was examined and after detailed analysis it has been decided that the fairest method would be to use the candidate raw scores against Valid Questions on Common Scale of 200 Marks to generate the Merit List as implementing a normalization factor on scores of uneven groups may result in to unjustifiable skews. Moreover consistency of the difficulty level of question papers across different dates and shifts was maintained to avoid any skew in results due to variations in QP difficulty level".
